Meridian Global Travel | Bi-Weekly Digital Performance Audit: Web Interaction & Lead Revenue Recovery

Period: 9 - 22 March 2026

1.Project Background

1.1. Data Architecture & Scope

This strategic performance audit was initiated to identify key drivers of lead generation and revenue recovery for **Meridian Global Travel**. The analysis is built upon the integration of **five separate datasets** (4 GA4 and 1 CRM dataset) bridging the gap between front-end web behavior and back-end sales outcomes.

<u>The scope of this audit covers two distinct periods:</u>

- **Web & Traffic Metrics:** A **Week-on-Week (WoW)** comparison between Week 1 (March 9–15) and Week 2 (March 16–22) to identify shifts in user engagement and acquisition patterns.
- **Enquiry & CRM Metrics:** A deep-dive analysis of the **latest single week of data** (Week 2) to evaluate current branch performance and lead conversion efficiency.

1.2. Technical Constraints

A critical constraint of this analysis was the **lack of direct GA4 backend access**; all insights were modeled from static data exports. By synthesizing these five datasets, this report provides a cross-functional view of the customer journey that would otherwise remain siloed.

1.3 Data Integrity & Validation

A "Data-First" approach was taken to ensure the insights provided are actionable and accurate:

- **Granular Tracking:** Enquiries were analyzed at the **Package ID** level. This prevents the merging of similar package names and ensures that performance is tracked against specific inventory items.
- **Status Filtering:** Conversion metrics focus strictly on **"Converted"** vs. **"Unconverted"** leads. By excluding administrative cleanup entries and pending

statuses, the report provides a true reflection of the sales "close rate," free from data noise.

2.Executive Summary

2.1 Core Performance Findings

- **Lead Quality & Volume:** The digital ecosystem demonstrates exceptional targeting, achieving a **99.1% Lead Quality** rating across **315 valid enquiries** in the latest week.
- **Traffic Dynamics (WoW):** Analysis of the **five integrated datasets** shows a **-9.72% decrease in total sessions** week-on-week. Despite this dip in volume, user engagement remains high, particularly for the **"All Holiday Packages & Flight Bundles"** page, which remains the primary traffic driver with **16K views**.
- **Channel Efficiency: Organic Search** continues to be the most vital acquisition channel, accounting for **47.8% of total sessions**. However, **Organic Social** and **Referral** channels showed positive growth (**+9.82%** and **+6.83%** respectively), indicating successful diversification of traffic sources.

2.2 The Revenue Recovery Opportunity

- **The Online Conversion Gap:** A significant performance disparity exists between channels. While the **London** and **Singapore** branches achieve conversion rates of **71.88%** and **66.67%**, the **Global Online** branch converts at only **39.37%**.
- **Financial Impact:** Given that Global Online handles the highest volume of valid enquiries (**136**), this "revenue leak" represents an estimated **$176,000 in lost weekly sales** (based on a $4,000 avg. booking value). Stabilizing this branch to a realistic **55% baseline** would recover approximately **$336,000 in monthly revenue**.

2.3 Strategic Recommendations

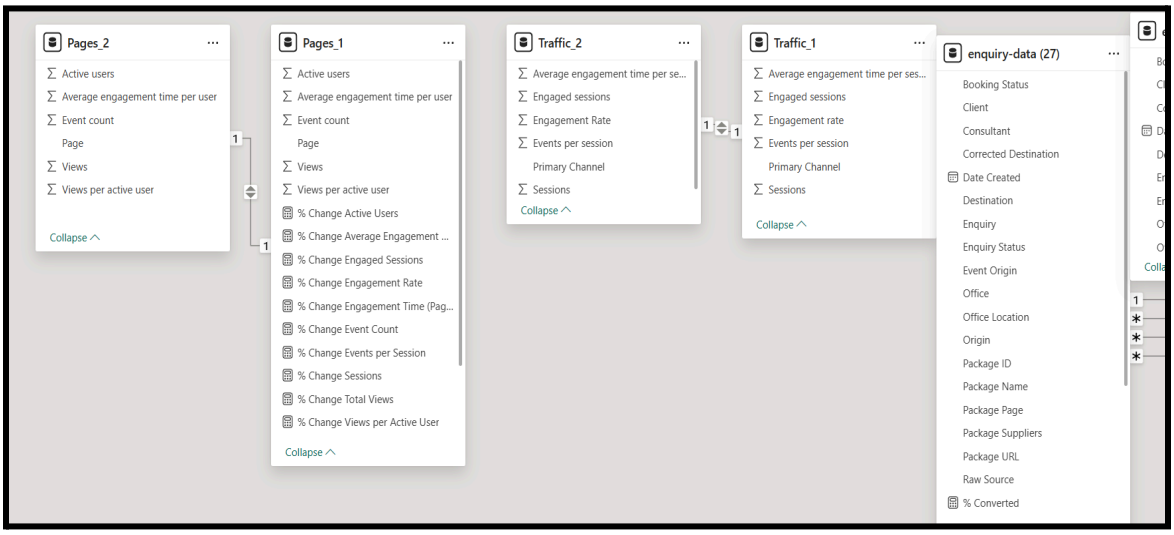
- **Web & UX Optimization:** To combat the WoW traffic decline and high bounce risks on mobile, the report recommends implementing **filter-based navigation** and transitioning to **experience-centric (people-focused) imagery** to increase emotional engagement.
- **KPI Restructuring:** Replace the current subjective CRM conversion metric with a dual-KPI model: **Web Conversion Rate** (Marketing performance) vs. **Lead Conversion Rate** (Sales performance).

- **Operational Audit:** Launch a **Consultant Interview Matrix** to identify the specific sales SOPs used by top-performing branches that can be scaled to the Online team to plug the 60% lead loss.

3. Confidentiality & Anonymization Disclaimer

This report is a strategic evaluation based on a real-world business analysis project. All proprietary data—including company names, branch locations, financial figures and specific package titles—have been **fully anonymized or procedurally generated** to protect the privacy and intellectual property of the original organization. The methodologies, strategic frameworks and analytical findings presented herein are the original work of the author.

4.Dataset Overview

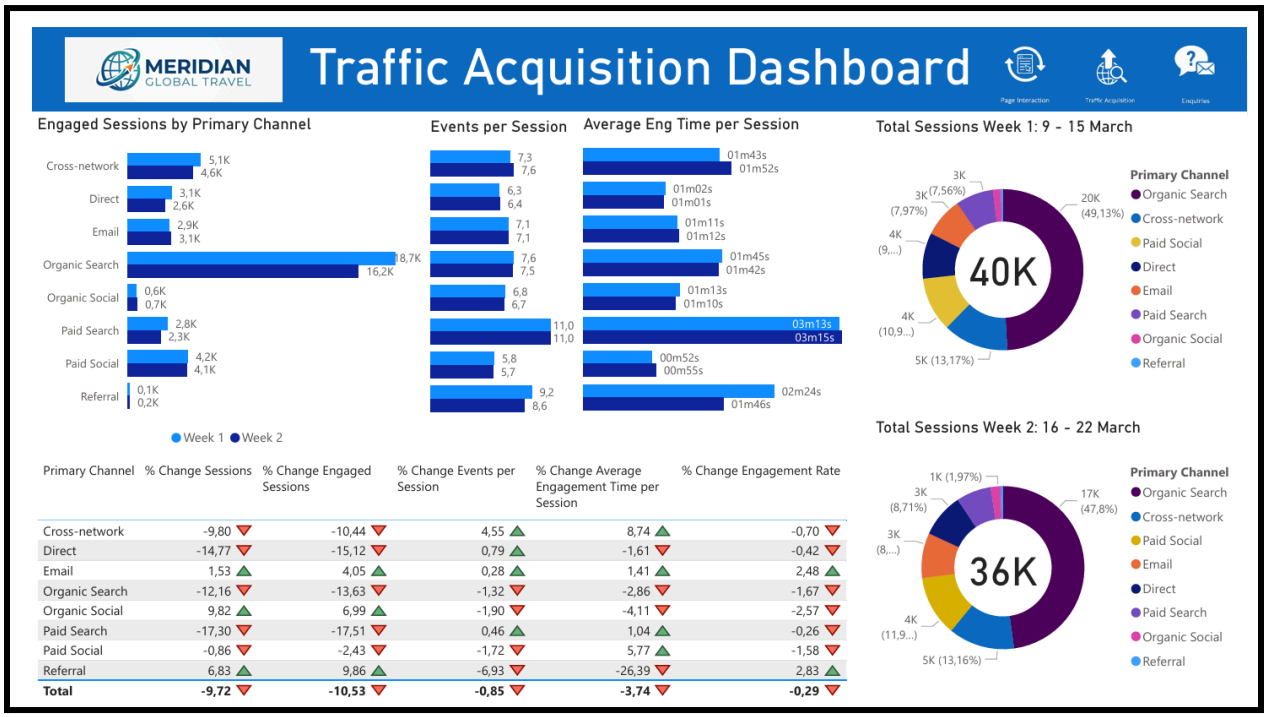


Power BI Data Model

- The analysis is built on a structured relational model comprising five primary tables extracted from Google Analytics and internal CRM sources.
- The **Traffic** tables (Week 1 and Week 2) provide granular acquisition data, including channel-specific sessions and engagement rates.
- The **Pages** tables track user behavior across key landing pages, measuring content depth through metrics like views per active user and average engagement time.
- Central to the conversion analysis is the **Enquiry-Data** table, which contains 27 fields—including booking status, package names and branch locations—enabling the correlation between front-end traffic patterns and final sales outcomes.

5.Insights and Recommendations

5.1.Dashboard 1: Traffic Acquisition



Primary Channel	% Change Sessions	% Change Engaged Sessions	% Change Events per Session	% Change Average Engagement Time per Session	% Change Engagement Rate
Cross-network	-9,80 ▼	-10,44 ▼	4,55 ▲	8,74 ▲	-0,70 ▼
Direct	-14,77 ▼	-15,12 ▼	0,79 ▲	-1,61 ▼	-0,42 ▼
Email	1,53 ▲	4,05 ▲	0,28 ▲	1,41 ▲	2,48 ▲
Organic Search	-12,16 ▼	-13,63 ▼	-1,32 ▼	-2,86 ▼	-1,67 ▼
Organic Social	9,82 ▲	6,99 ▲	-1,90 ▼	-4,11 ▼	-2,57 ▼
Paid Search	-17,30 ▼	-17,51 ▼	0,46 ▲	1,04 ▲	-0,26 ▼
Paid Social	-0,86 ▼	-2,43 ▼	-1,72 ▼	5,77 ▲	-1,58 ▼
Referral	6,83 ▲	9,86 ▲	-6,93 ▼	-26,39 ▼	2,83 ▲
Total	**-9,72** ▼	**-10,53** ▼	**-0,85** ▼	**-3,74** ▼	**-0,29** ▼

1. Overall Performance Summary

Total Sessions saw a **9.72% decline** (dropping from **40k to 36k**). While the majority of channels saw a pullback in volume, **Email, Organic Social and Referral** bucked the trend by showing growth.

- **Recommendation:** Investigate if Week 1 contained a specific holiday, promotion or "payday" surge that created an artificially high baseline, as the decline is broad-based.

2. High-Intent "Quality" in Paid Search & Direct

Despite **Paid Search** and **Direct** seeing the sharpest losses in volume (**-17.30%** and **-14.77%** respectively), the users who *did* visit were highly engaged. Paid Search maintained a chart-topping **11.0 events per session** and an average engagement time of **03m15s**.

- **Recommendation:** Since Paid Search quality is elite but volume is dropping, review your keyword bids or budget caps. You are losing potential high-value customers who are clearly interested in the content.

3. Organic Search: The Volume Anchor in Decline

Organic Search remains your powerhouse, driving **47.8% of all traffic**. However, it was the only channel to see a "red sweep"—declines in Sessions (**-12.16%**), Engagement Time (**-2.86%**) and Engagement Rate (**-1.67%**).

- **Recommendation:** A broad decline in Organic Search often suggests a shift in seasonal search intent or a competitor outranking key terms. Conduct a quick SEO audit on your top 5 landing pages to ensure content remains relevant.

4. Cross-Network: High Volume, High Retention

Cross-network is your second-largest driver (**5.1k vs 4.6k**) and shows impressive stickiness. It saw an **8.74% increase** in Average Engagement Time (**01m52s**), suggesting the multi-channel approach is reaching the right audience.

- **Recommendation:** Maintain current spend here; the efficiency (Events per Session: **7.6**) is increasing even as the platform scales.

5. Email: The "Golden Child" of Week 2

Email was the only channel to achieve growth across every single metric, including a **1.53% increase in sessions** and a **2.48% boost in Engagement Rate**.

- **Recommendation:** Analyze the specific subject line or offer sent in Week 2. This campaign resonated perfectly with the audience and should be used as a template for future CRM efforts.

6. Social Media Divergence (Organic vs. Paid)

- **Organic Social** successfully drove more users (**+9.82% sessions**) but they were "window shoppers" as engagement time dropped by **4.11%**.
- **Paid Social** saw a volume dip (**-0.86%**) but a significant **5.77% increase** in Average Engagement Time.
- **Recommendation:** Your Organic Social is great for reach but your Paid Social is reaching a more "serious" audience. Consider "boosting" the top-performing Organic posts to bridge the gap between reach and engagement.

7. Referral: Low Volume, High Potential

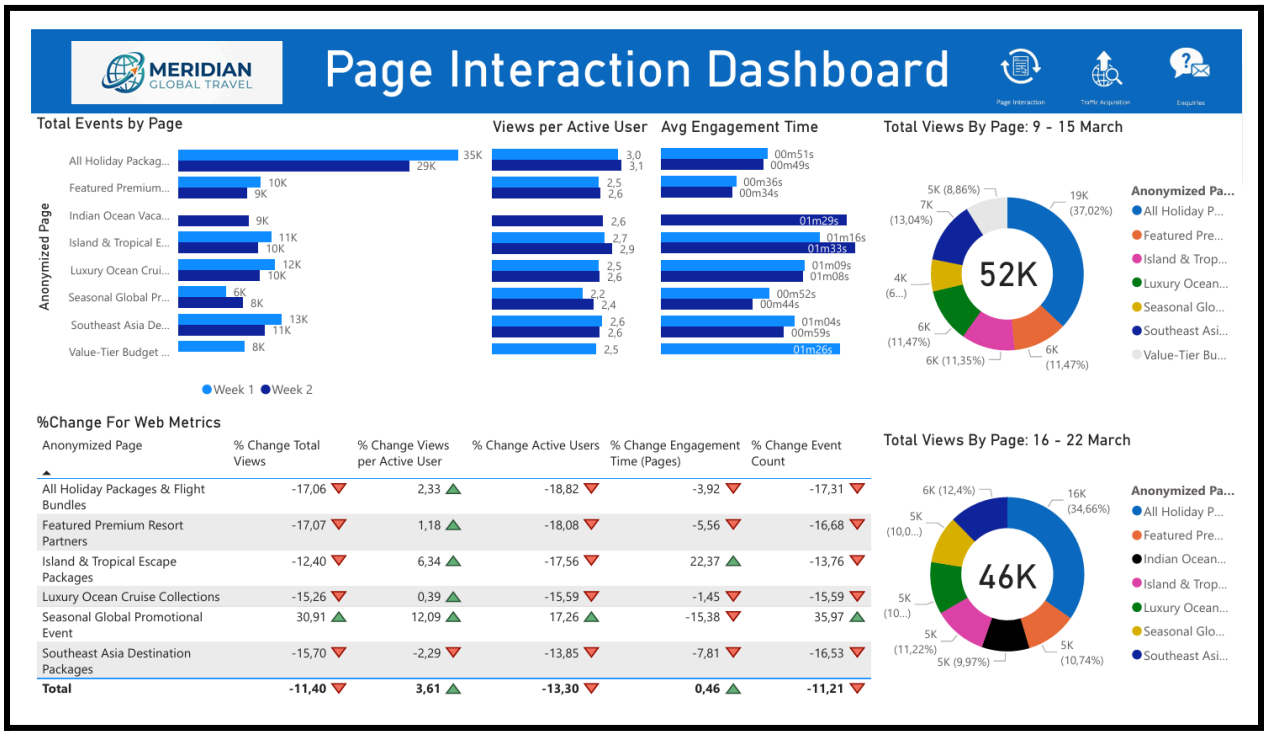
Referral traffic is tiny (**~200 sessions**) but powerful, boasting the second-highest Events per Session (**8.6**). It saw a **9.86% increase** in Engaged Sessions.

- **Recommendation:** Identify the top 3 referring domains. Reach out to these partners for a more formal collaboration, as their audience is highly pre-qualified and active on your site.

Top 3 Strategic Actions:

1. **Replicate Email Success:** Audit the Week 2 email campaign to identify why it was the only channel to grow across all metrics.
2. **SEO Defense:** Investigate the 12.16% drop in Organic Search to ensure we haven't lost ranking on high-volume keywords.
3. **Scale Paid Search Quality:** Since Paid Search has the highest engagement time (3m 15s), consider a small budget increase to offset the volume drop.

5.2.Dashboard 2: Page Interaction



Anonymized Page	% Change Total Views	% Change Views per Active User	% Change Active Users	% Change Engagement Time (Pages)	% Change Event Count
All Holiday Packages & Flight Bundles	-17,06 ▼	2,33 ▲	-18,82 ▼	-3,92 ▼	-17,31 ▼
Featured Premium Resort Partners	-17,07 ▼	1,18 ▲	-18,08 ▼	-5,56 ▼	-16,68 ▼
Island & Tropical Escape Packages	-12,40 ▼	6,34 ▲	-17,56 ▼	22,37 ▲	-13,76 ▼
Luxury Ocean Cruise Collections	-15,26 ▼	0,39 ▲	-15,59 ▼	-1,45 ▼	-15,59 ▼
Seasonal Global Promotional Event	30,91 ▲	12,09 ▲	17,26 ▲	-15,38 ▼	35,97 ▲
Southeast Asia Destination Packages	-15,70 ▼	-2,29 ▼	-13,85 ▼	-7,81 ▼	-16,53 ▼
Total	**-11,40** ▼	**3,61** ▲	**-13,30** ▼	**0,46** ▲	**-11,21** ▼

1. Overall Performance Overview

Total Views across all key pages decreased from **52k to 46k** (**-11.40%**). While volume is down, the **Views per Active User** actually increased by **3.61%**, suggesting that the users who are visiting are looking at more content per session.

- **Recommendation:** Since users are consuming more pages per visit, ensure your "Cross-Sell" widgets (e.g., "Users who viewed Zanzibar also viewed Mauritius") are prominent to capitalize on this high-intent browsing behavior.

2. "Seasonal Global Promotional Event": The Growth Outlier

Despite having the lowest total events, this page was the standout performer, showing a massive **30.91% increase in Total Views** and a **17.26% increase in Active Users**. However, Average Engagement Time dropped by **15.38%** (from **52s to 44s**).

- **Recommendation:** The surge in traffic with a drop in time spent suggests a "quick-click" promotional effect. Audit the page to ensure the most important "Sale" information is "above the fold" so users find what they need before they bounce.

3. All Holiday Packages & Flight Bundles: The Volume Heavyweight

This remains your most critical page, accounting for **34.66% of Total Views** in Week 2. While it saw a **17.06% drop in views**, it maintains the highest "stickiness" with **3.1 views per active user**.

- **Recommendation:** A 17% drop in your primary volume driver is the main cause of the overall site decline. Check if any paid search or social campaigns pointing to this page were dialed back in Week 2.

4. Island & Tropical Escape Packages: The Engagement Champion

Island & Tropical Escape Packages is your highest-quality destination page. It was the **only page** to see an increase in Average Engagement Time, jumping a significant **22.37%** (from **01m16s to 01m33s**). It also saw a **6.34% increase** in Views per Active User.

- **Recommendation:** Island & Tropical Escape Packages is currently "capturing the imagination" of your users. Feature this destination more prominently in next week's Email or Organic Social to leverage this high organic interest.

5. Southeast Asia Destination Packages & Cruise Packages: Performance Warning

Southeast Asia Destination Packages was the weakest performer, seeing a **"Red Sweep"** of declines across all metrics, including a **15.70% drop in views** and a **16.53% drop in event count**. Similarly, **Featured Premium Resort Partners** and **Luxury Ocean Cruise Collections** saw double-digit declines in Active Users (**-18.08%** and **-15.59%** respectively).

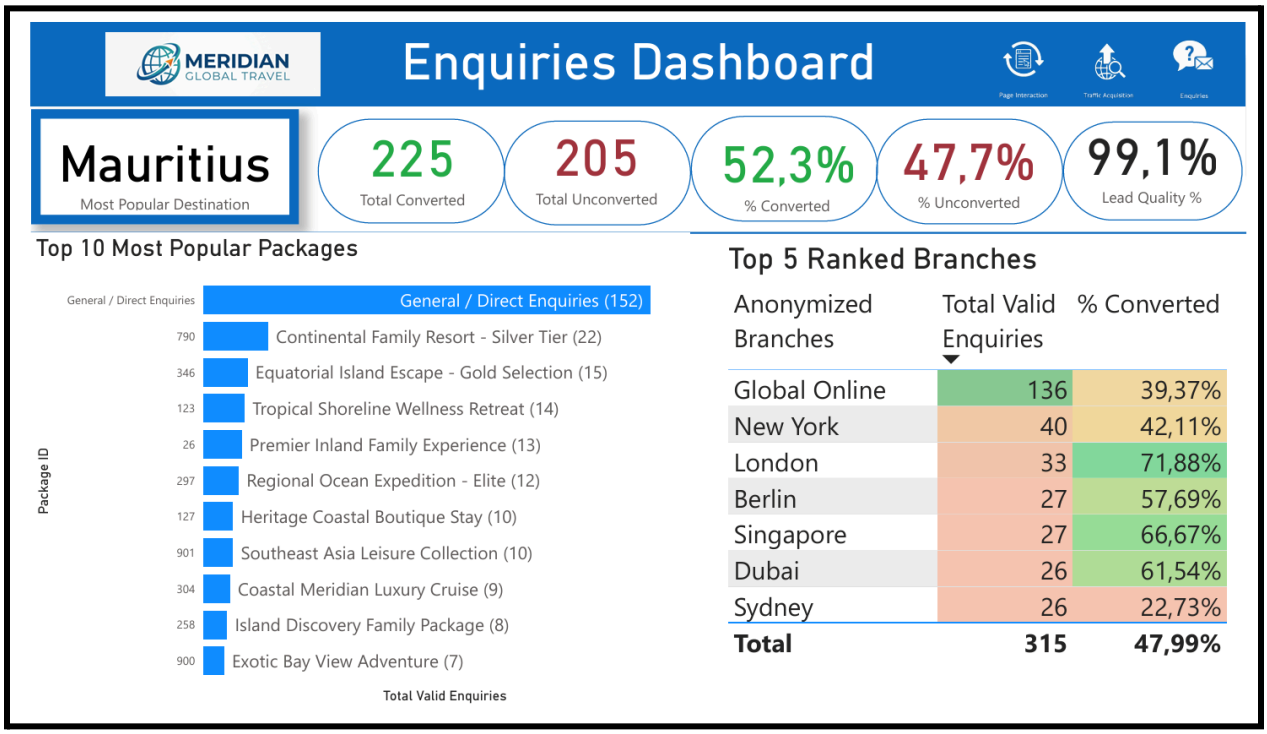
- **Recommendation:** These pages are losing relevance quickly. Consider refreshing the "Deals" or hero images on these pages, as the current content is

failing to attract or retain users compared to the "Promotional" or "Island & Tropical Escape" pages.

Top 3 Strategic Actions:

1. **Fuel the Fire:** Increase internal linking from the "Holiday Packages" page to "Seasonal Global Promotional Event" to funnel that high volume toward the trending sale.
2. **Island & Tropical Escape Packages Case Study:** Investigate why Island & Tropical Escape Packages' engagement rose while all others fell—is there a new video or better pricing on that page? Replicate that layout for Southeast Asia Destination Packages.
3. **Monitor the "Sale" Bounce:** Ensure the "Seasonal Global Promotional Event" page has a clear Call-to-Action (CTA) to prevent the 15% drop in engagement time from turning into lost leads.

5.3.Dashboard 3: Enquiries



1. The Lead Quality vs. Conversion Paradox

Your **Lead Quality** is a near-perfect **99.1%**, indicating that marketing is successfully filtering out "junk" traffic before it hits the CRM. However, the **Total Converted** rate sits at **52.3%**, meaning nearly half of these high-quality, valid prospects are not reaching a booking.

- **Recommendation:** Since the issue isn't lead quality, the "leak" is in the sales process. Audit the **Average Lead Response Time**; in the travel industry, conversion rates often drop significantly if a lead isn't contacted within the first hour of enquiry.

2. The "General Enquiry" Overload

General / Direct Enquiries is your largest category by a massive margin, with **152 enquiries**. The next closest specific package, the **Continental Family Resort - Silver Tier**, has only **22**.

- **Recommendation:** A high volume of "General" enquiries suggests your website forms are too broad, forcing agents to spend more time qualifying what the user actually wants. Add a required "Destination" or "Holiday Type" dropdown to your primary enquiry form to push these 152 users into specific buckets (like Mauritius or Cruises) before they reach the CRM.

3. Branch Efficiency: The London Gold Standard vs. The Sydney Siphon

The **London** branch is your "star performer" with a **71.88% conversion rate**. Conversely, **Sydney** is struggling with a **22.73% conversion rate**, despite handling a similar volume of leads as your higher-performing branches like Dubai (61.54%).

- **Recommendation:** Sydney is currently a "siphon" for marketing spend. Investigate the sales script or staff capacity in the Sydney branch. Until their conversion rate improves, consider re-routing high-intent luxury leads (like the **Regional Ocean Expedition - Elite**) to the London or Singapore teams.

4. The "Mauritius" Magnet and Package Stickiness

Mauritius is your **Most Popular Destination** and the **Continental Family Resort - Silver Tier** is your top-performing specific package with **22 enquiries**. However, the **Exotic Bay View Adventure** is at the bottom of your top 10 with only **7 enquiries**.

- **Recommendation:** Since Mauritius is your primary "hook," ensure your CRM has an automated "Mauritius Destination Guide" email that triggers the moment a lead enters the system. This keeps the user engaged while waiting for an agent. For lower-performing packages like the "Exotic Bay View," consider a "Limited Time Offer" tag on the website to see if you can drive that volume up to double digits.

5. Global Online: High Volume, Low Velocity

The **Global Online** branch handles the most volume in the company (**136 enquiries**, or roughly 43% of all valid enquiries) but has a below-average conversion rate of **39.37%**.

- **Recommendation:** The Online branch is likely overwhelmed by volume. Implement a **Lead Scoring** system in the CRM to prioritize the 136 leads based

on "Booking Urgency" (e.g., travel dates within 3 months). This allows the online team to focus their immediate energy on the leads most likely to close today, rather than working through the list chronologically.

Top 3 Strategic Actions:

1. **Standardize the "London Method":** Document the sales follow-up process used in the London branch and mandate it as the company-wide standard to bring Sydney and Global Online closer to that 70% benchmark.
2. **Optimize the Enquiry Form:** Add a "Package Interest" field to the web form to reduce the number of **General Enquiries (152)**, allowing for faster, more personalized responses from agents.
3. **Automate Mauritius Engagement:** Create a specific CRM workflow for **Mauritius** leads that includes social proof (reviews) and "frequently asked questions" to nurture the lead immediately upon submission.

5.4.Conversion Rate Optimization: Strategies to Recover $336,000 in Lost Revenue

1. The Global Online Revenue Leak: High Intent vs. Low Velocity

The **Global Online** branch manages the highest volume of valid enquiries (**136**), yet converts only **39.37%**. With a **99.1% Lead Quality** rating, these are not "window shoppers"—they are high-intent customers ready to book. Currently, roughly **60% of these potential travelers** are being lost to competitors during the online handling process.

- **Recommendation:** Launch an immediate audit of the **Enquiry SOPs** and execute a **Consultant Interview Matrix**. Interview **Top, Middle and Lower performers** from high-converting branches (London/Singapore) and the Online/Sydney branches. The goal is to identify the "Root Cause" of the 60% loss—whether it's technical friction, response lag, or a lack of specific digital closing tools—and get direct advice from consultants on how to remove barriers to closing.

2. Financial Impact: The Multiplier Effect of Small Gains

Even a marginal 10–15% increase in the conversion rate for the Online branch would result in a massive jump in baseline revenue without spending an extra dollar on marketing. Moving the Online branch from its current **39%** toward the **London standard of 71%** represents a significant untapped recovery opportunity.

- **Recommendation:** Quantify the "Cost of Inaction" for stakeholders. Assuming a conservative **Average Booking Value of $4,000** (standard for travel packages):
    - **Current Monthly State (39% Conversion):** ~216 bookings = $864,000
    - **Realistic Recovery (55% Conversion):** ~300 bookings = $1,200,000 *

        - Monthly Gain: +$336,000
    - **Gold Standard Target (70% Conversion)**: ~380 bookings = $1,520,000
        - Monthly Gain: +$656,000

Standardizing the process to reach even the 55% "Realistic" mark would plug a **$336,000** monthly revenue leak.

3. Branch Performance Polarity: Cross-Pollinating Success

There is a stark contrast between **London (71.88%)** and **Sydney (22.73%)**. While London is the "Gold Standard," Sydney is currently a "siphon" for high-quality leads, converting fewer than 1 in 4 prospects.

- **Recommendation:** During your consultant interviews, specifically compare the **Walk-in vs. Online** workflow. Determine if the high conversion in London is due to better face-to-face engagement tools or a more aggressive follow-up schedule. Use these "Top Performer" insights to rewrite the Online and Sydney SOPs, ensuring that the high-volume digital channel benefits from the same sales techniques that make the boutique branches successful.

4. Scaling Human Excellence to Digital Volume

The **Global Online** team is likely experiencing "Lead Fatigue" from handling **136 enquiries**, whereas the top-performing branches like **Dubai (61.54%)** handle lower volumes with higher precision. The system is currently failing to scale the quality of service as volume increases.

- **Recommendation:** Use the "Lower Performer" interviews to identify where the process "breaks" under volume. If consultants feel overwhelmed by the **152 General Enquiries**, implement a pre-qualification filter or an automated "Instant Engagement" packet for Mauritius (the most popular destination) to keep the lead warm while the consultant prepares to close.

Top 3 Strategic Actions:

1. **Execute the Consultant Interview Matrix:** Interview **Top, Mid and Low performers** across London, Sydney and Global Online this week to map out the "Sales Friction" points.
2. **SOP Alignment & Revenue Recovery:** Rewrite the Online branch SOPs based on the "London Method," aiming to recover at least **$336,000 in lost monthly revenue** by raising conversion to a 55% baseline.
3. **The "Top Performer" Pilot:** Temporarily re-route a small percentage of Global Online leads to a top-performing consultant in London to prove that the

conversion gap is **process-driven**, not **lead-driven**, justifying the need for company-wide retraining.

---

6. Web and Conversion Optimization Strategy

The Positive Elements (The "Wins")

- **Strong Trust Signals:** Meridian Global Travel excels at establishing immediate credibility. The Trustpilot rating and "Price Promise" are prominently displayed, reducing friction for first-time visitors.
- **Visual Aspiration:** High-quality, vibrant imagery effectively moves users from the "dreaming" phase to the "planning" phase.
- **Expert Positioning:** By emphasizing "Expert Advice," the site differentiates itself from automated engines, highlighting the value of the human consultant.

The Negative Elements (The "Gaps")

- **Search Friction & Navigation:** Currently, the navigation requires users to pick a tab and manually sift through packages. The lack of granular filters (price, destination, cruise vs. hotel, beach vs. ski) creates a cognitive load that can lead to "choice paralysis."
- **Landscape-Centric vs. Experience-Centric Imagery:** While the landscapes are beautiful, they lack the human element. We are selling an *experience*, not just a destination. A lack of people in imagery makes it harder for a prospect to "see themselves" in the holiday, potentially lowering the emotional drive to enquire.
- **Mobile Latency:** The mobile experience remains "heavier" than desktop. For the 60%+ of users on mobile, slow load times can lead to high bounce rates before an enquiry is even initiated.
- **The "Vanity" Conversion Metric:** Currently, the conversion rate is a subjective value entered into the CRM by consultants based on "signals." This is a vanity metric that conflates marketing effectiveness with sales skill, making it impossible to see where the actual funnel is breaking.

Impact on Lead Growth and Revenue

The primary concern is the **Friction in the Discovery Funnel**. When a user cannot filter by their specific budget or interest, or cannot emotionally connect with the imagery, they are less likely to transition from "visitor" to "lead." Furthermore, without a clear distinction between **Web Conversion** and **Lead Conversion**, the business cannot accurately identify if revenue loss is due to a poor website experience or a breakdown in the sales enquiry process.

Top 5 Recommendations for Improvement

1. **Dynamic Navigation & Filtering:** Implement a robust filtering system that allows users to cross-reference categories (e.g., "Ski Holidays" + "Under $2,000" + "Europe"). This allows users to find exactly what they want without contextless searching.
2. **People-Centric Imagery A/B Testing:** Transition from static landscape photos to "experience" imagery featuring people engaging in activities (e.g., a family laughing on a Zanzibar beach or a solo traveler hiking). I recommend **A/B testing** these people-centric images against current landscapes to confirm the increase in emotional engagement and enquiry rates.
3. **Restructured Conversion Analytics:** Move away from the single CRM "vanity" rate and implement two distinct KPIs:
    - **Web Conversion Rate:** Total Website Visitors vs. Total Enquiries (Measures Web/Marketing ROI).
    - **Lead Conversion Rate:** Total Enquiries vs. Total Confirmed Bookings (Measures Sales/Consultant ROI).
4. **Mobile Image & Asset Optimization:** Implement automated image compression and "lazy loading." Reducing page load time to under 3 seconds will directly improve SEO rankings and lower the bounce rate for the 60% of users on mobile.
5. **Hyper-Local Personalization:** Use geo-targeting to show users deals departing from their nearest major travel hub (e.g., London, Singapore, or Dubai). Personalized offers based on proximity have a significantly higher click-through rate than generic global deals.

7.Code and Technical Implementation (including assumptions)

1. Data Extraction & Architecture

- **Manual Ingestion:** Data from four Google Analytics screenshots was manually transcribed into Excel to form the baseline datasets: `Traffic_1`, `Traffic_2`, `Pages_1` and `Pages_2`.
    - **Assumption:** It is assumed that the screenshots represent a filtered subset of the live environment. Consequently, manual calculations in Excel varied slightly from the "Totals" displayed in the screenshots. To ensure internal consistency, the analysis treats the screenshot rows as the complete universe of data and disregards the screenshot's pre-calculated totals.
- **Weekly Comparability:** During data auditing, it was identified that only 7 out of 8 pages matched between the two weeks.
    - **Assumption:** Pages without a corresponding partner in the alternate week (e.g., *Indian Ocean Vacation Packages* vs. *Value-Tier Budget Travel Options*) are assumed to be time-bound promotions or new campaign

launches. These were excluded from direct week-on-week comparisons but included in total volume metrics.

- **Data Connection:** All prepared Excel sheets and the provided `enquiry-data (27)` file were connected to Power BI for modeling.

2. Data Transformation (Power Query)

Google Analytics Tables (Traffic & Pages)

- **Row Filtering:** The bottom "Total" rows were removed using the *Remove Bottom Rows* function.
    - **Assumption:** It is assumed that Power BI's native aggregation engine is more accurate for visualization than static total rows, which could cause "double-counting" errors when plotted on charts.
- **Temporal Normalization:** Average Engagement Time columns were converted to a "Total Seconds" format. This involved:
    - Changing type to Text.
    - Replacing the default date string ("1899/12/31 ") with an empty string.
    - Converting to Duration and then to Total Seconds.
    - **Logic:** Standardizing time as a numerical integer (seconds) allows for mathematical operations like calculating percentage changes and averages, which is not possible with standard "Time" formats.

3. Enquiry Table Optimization

- **Brand Stripping:** Created an `Office Location` column by stripping the prefix "Meridian Global Travel " from the `Office` column.
    - **Assumption:** Removing brand redundancy improves dashboard readability and allows the user to focus purely on the geographic or branch-specific performance.
- **Source Cleaning:** Created `Event Origin` by removing "Source: Web enquiry | Event: " from the `Origin` strings.
- **Destination Mapping:** Corrected spelling inconsistencies (e.g., "bali" to "Bali", "Vic Falls" to "Victoria Falls") via a Conditional Column.
    - **Logic:** Data hygiene is critical for accurate "Top Destination" reporting; without this step, a single destination could be split across multiple bars in a chart.
- **Handling Nulls in Package Data:** 152 null values were identified across `Package ID`, `Suppliers` and `URL`.

    - **Assumption:** These nulls are assumed to represent **General/Direct Enquiries** rather than system errors. They represent users who contacted the brand through the site generally rather than from a specific product page.
- **URL Parsing:** The `Package URL` was transformed into a human-readable `Package Name` using a custom formula that removed the URL path, replaced dashes with spaces and applied Proper Case.
- **Lead Quality Audit:** Identified 447 "n/a" values in `Booking Status`.
    - **Assumption:** These are treated as "Awaiting Action" or "Unprocessed Leads" and were highlighted for a manual audit to prevent potential revenue leakage.

4. Dashboard 1: Traffic Acquisition

- **Design Philosophy:** Used a blue rectangular banner and the Meridian Global Travel logo for brand alignment. Navigational icons were implemented using *Actions* for seamless movement between dashboards.
- **Comparative Layout:** Used stacked Donut Charts for Total Sessions and Clustered Bar Charts for engagement metrics.
    - **Logic:** Channels across both weeks were manually assigned identical colors (e.g., Organic Search is always blue) to reduce cognitive load for the GM when comparing shifts.

DAX Measures for Time Display: To make "Total Seconds" readable on the dashboard, the following logic was applied to convert integers back into a "00m00s" string:
Code snippet

```
duration week 1 traffic =
VAR TotalSeconds = SUM('Traffic_1'[Average engagement time per session])
VAR Minutes = INT(TotalSeconds / 60)
VAR RemainingSeconds = ROUND(MOD(TotalSeconds, 60), 0)
RETURN FORMAT(Minutes, "00") & "m" & FORMAT(RemainingSeconds, "00") & "s"
```

-
- **Visual Indicators:** Applied Conditional Formatting to the % Change table.
    - **Logic:** Icons (Green Up/Red Down) were placed to the immediate right of the values to ensure proximity and clarity in identifying performance trends.

5. Dashboard 2: Page Interaction

- **Consistency Logic:** This dashboard mirrors the Traffic layout exactly.
    - **Assumption:** Consistency in layout allows the executive to interpret the data faster, as they already understand the visual hierarchy established in the first dashboard.

- **Metric Focus:** Focused on "Views per Active User" and "Active Users" to gauge content stickiness.
    - **Logic:** Calculating % Change across Event Count and Engagement Time highlights which pages are losing relevance versus those growing in popularity (e.g., *Seasonal Global Promotional Event*).

6. Dashboard 3: Enquiries (Detailed Technical Implementation)

This dashboard focuses exclusively on the `enquiry-data (27)` query to evaluate the "bottom of the funnel" performance for the latest week (16 – 22 March).

KPI Cards Section

Six KPI cards were created to provide an immediate "Health Check" of the week's leads.

- **Most Popular Destination (The "North Star" Metric):**
    - **DAX Logic:** ```dax Most Popular Destination = TOPN(1, VALUES('enquiry-data (27)'[Corrected Destination]), [Total Valid Enquiries], DESC)
    - **Assumption:** This identifies the single destination with the highest volume of legitimate enquiries.
    - **Logic:** It uses the `Corrected Destination` column (created during data cleaning) to ensure that variations like "bali" and "Bali" are counted together, providing a mathematically accurate "winner."
- **Lead Quality %:**
    - **Logic:** This measure compares "Valid Leads" (Converted, Unconverted and Assigned) against the total rows.
    - **Assumption:** Any enquiry labeled "Closed - Clean up" is assumed to be an error or test and is excluded from the quality score.
- **Conversion Metrics (% Converted & % Unconverted):**
    - **Assumption:** The conversion rate is calculated **only** against "Resolved" leads. Leads that are still "Assigned" or "Open" are excluded from the denominator to ensure the sales team's closing ratio isn't artificially lowered by active, ongoing files.

Graph 1: Top 10 Most Popular Packages

- **Measure - Total Valid Enquiries:**
    - **Logic:** `CALCULATE(COUNTROWS('enquiry-data (27)'), 'enquiry-data (27)'[Enquiry Status] <> "Closed - Clean up")`.
    - **Logic:** This is the master filter for the chart, ensuring management only sees real customer intent.

- **Visual Strategy:** Used `Package ID` on the axis for 100% accuracy but applied a **Dynamic Package Label** to the bars.
    - **Logic:** The label measure combines the cleaned `Package Name` and the `Enquiry Count` (e.g., "Southeast Asia Leisure Collection (52)").
    - **Assumption:** If multiple Package IDs have the same name, they are kept separate to identify if specific variations of a deal are performing better than others.

Graph 2: Top 5 Ranked Branches (Branch Efficiency)

- **Ranking Logic:** A **Top N (Top 6)** filter was applied to the `Office Location` field based on enquiry volume.
- **Branch Selection Assumption:** Although the task asks for the Top 5, **"Global Online"** was included.
    - **Logic:** "Global Online" represents a massive portion of the digital ecosystem. Excluding it would give the GM an incomplete picture of where leads are actually being serviced.
- **Efficiency Heatmap:** Conditional formatting (Background Color Scales) was applied to the `% Converted` column.
    - **Logic:** This highlights branches that are "punching above their weight"—those that may have lower volume but are converting a higher percentage of their leads.

Summary of Logic & Assumptions Added:

1. **Corrected Destination Logic:** Explained how the KPI "Most Popular Destination" relies on the cleaned data to be accurate.
2. **Resolved vs. Total Leads:** Clarified why "Active" leads are removed from the conversion percentage to give an honest "Closing Rate."
3. **Accuracy vs. Readability:** Detailed the use of Package IDs for data integrity and Package Labels for executive readability.
4. **"Global Online" as a Branch:** Justified the inclusion of the Online hub in the branch rankings.
